Principle of Operation:

Parker Autoclave Engineers High & Ultra High Pressure connections are a refinement of the original cone & thread joint which has been the standard connection in high pressure technology since its development by an agency of the US Government over 90 years ago. This design set precedence of quality and reliability found in all Parker Autoclave Engineers products to this day.

The pressure handling capabilities of this connection design have been applied successfully to control pressures up to 150,000 psi. All-metal sealing and working temperatures from 0°F to 600°F (-18°C to 315°C), along with a variety of different material options make this connection one of the most versatile ever. Fittings and tubing found in this section are designed using ASME B31.3 Chapter IX standards to be compatible with all of our Ultra High Pressure Valve and Fitting configurations.

Ultra High Pressure Fittings and Tubing Features:

- Utilize “C100 and C150” Style Ultra High Pressure Coned-and-Threaded connections (see Tools & Installation for port dimensions)
- Available sizes are 1/4, 3/8, 5/16, and 9/16 inch nominal outside diameter tubing
- Fittings manufactured using UNS S31600, 316 Stainless Steel or UNS S15500 15-5PH (as required) stainless steel material, cold worked to Parker Autoclave proprietary standards.
- Operating Temperatures from 0°F to 600°F (-18°C to 315°C)
- Tubing Material for 100,000 psi service is HP160 SS (Autofrettage is standard), 150,000 psi Tubing material is UNS S31600/S31603 Cold Worked 316/316L Stainless Steel
- Anti-vibration connection components available, see pages 11 & 12

All Parker Autoclave Engineers fittings are marked with manufacturers name, part number, material, heat code and maximum pressure for complete traceability.
Fittings
Ultra High Pressure Tubing - Pressures to 150,000 psi (10350 bar)

Parker Autoclave Engineers Ultra High Pressure Cone & Thread Fittings, Couplings, Check Valves and 100VM and 150V Valves utilize the F Style (with C100 or C150 designations) Cone & Thread Connection Detail (see Tools & Installation brochure for dimensions).

Ultra High Pressure Connection Components:

All valves and fittings are supplied complete with appropriate gland and tubing collar. To order these components separately, use part numbers listed below. When using plug, collar is not required. Tubing Pressure Caps can be found in Adapter brochure.

Note: Union Couplings are designed with a removable seat insert allowing disassembly and tubing removal without the necessity of loosening other items in a line.

Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower. All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.

Union Coupling Assembly

Union vs. Straight Coupling Comparison

In much the same as with a traditional Pipe Union, the PAE Union Coupling is used to easily disassemble tubing runs when valves or fittings need to be replaced after original installation. The Body and Insert are two different pieces in the same assembly. The body can slide down tubing leaving only the insert and the tubing tips engaged. Then with only minimal tube shift, the insert drops out allowing the tubing to be removed avoiding the need to disassemble multiple tubing sections from closest elbow.

Note: When Special Materials are requested, the only material that is changed is the Insert (wetted).
Parker Autoclave Engineers offers a selection of austenitic cold drawn stainless steel tubing designed to match the performance standards of Parker Autoclave valves and fittings. Parker Autoclave ultra high pressure tubing is manufactured of 316/316L (UNS S31600/S31603) or HP160 (100Ksi only) specifically for high pressure applications requiring both strength and corrosion resistance. The tubing is furnished in random lengths between 20 feet (6 meters) and 26.5 feet (8.0 meters). The average is 24 feet (7.3 meters). Our HP160 tubing was designed by Parker Autoclave Engineers specifically for High Cyclic use such as Waterjet cutting machines. Special longer lengths are available. Consult factory.

Inspection and Testing:

Parker Autoclave Engineer’s ultra high pressure tubing is inspected to assure freedom from seams, laps, fissures or other flaws, as well as carburization or intergranular carbide precipitation. The outside and inside diameters of the tubing are controlled within close tolerances including runout. Sample pieces of tubing for each lot are tested to confirm mechanical properties. Hydrostatic testing is also performed on a statistical basis and is conducted at the working pressure of the tube. Parker Autoclave will perform 100% hydrostatic testing up to 1.5 times working pressure at additional cost if desired.

Special Material:

In addition to the type 316/316L and HP160 High Cycle tubing listed in this section, Parker Autoclave Engineers has a limited stock of hard-to-obtain non-standard lengths of exotic material tubing.

Temperature Capability:

Ultra High Pressure Tubing is capable of temperatures from -0° to 600°F. Please reference Technical Brochure for material, temperature, and bending data. Consult Factory for assistance with tubing applications below 0°F or above 600°F (-18° or 315°C).

Tubing Tolerance:

<table>
<thead>
<tr>
<th>Nominal Tubing Size inches (mm)</th>
<th>Tolerance/Outside Diameter inches (mm)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1/4 (6.35)</td>
<td>.248/.243 (6.30/6.17)</td>
</tr>
<tr>
<td>3/8 (9.53)</td>
<td>.370/.365 (9.40/9.27)</td>
</tr>
<tr>
<td>9/16 (14.29)</td>
<td>.557/.552 (14.15/14.02)</td>
</tr>
<tr>
<td>5/16 (7.94)</td>
<td>.310/.306 (7.87/7.77)</td>
</tr>
</tbody>
</table>

Note:

Standard Tubing is manufactured in accordance with ASME B31.3 Chapter IX standards using UNS S31600/S31603, 316/316L or HP160 Stainless material, cold worked to Parker Autoclave proprietary standards.

Tubing outside diameter dimensions do not meet standard commercial tubing tolerances. Tubing outside dimensions are specifically chosen to meet tube threading die requirements.

Parker Autoclave Engineers components and tubing are designed as a “complete system” for safety and our fittings will not be compatible with standard “commercial” tubing.

Autofrettage for High Pressure High Cycle (HPHC) applications:

If high cycle fatigue life is a concern, Parker Autoclave Engineers can supply tubing which has been autofrettaged for improved fatigue resistance. For internally pressurized tubing, autofrettage is a method by which the inner wall of the tube is precompressed to reduce the tube operating bore stresses, thereby increasing cycle life and increasing the life span of the tubing. (every application is different and while life span increases of 40% have been reported, we cannot guarantee any specific increase in tubing life.)

Ultra High Pressure Connection: Step by Step Assembly Instructions

Step 1
- Insert Coned and Threaded Nipple through Gland (Typical Tee Fitting Assembly consisting of Fitting Body, Collar, Gland, and Coned and Threaded Nipple or Tube End.)

Step 2
- Thread Collar turning (Reverse Threaded to prevent rotation during torque process) onto Coned and Threaded Nipple end.

Step 3
- For proper Collar placement, thread Collar onto Nipple leaving 1 to 2 full threads exposed on Fitting side of Collar. Lubricate Gland Threads and Collar Contact Area with anti-seize compound and tube tip with process compatible lubricant (do not use metal-flake type).

Step 4
- Insert Tube/Gland assembly into Fitting body, turning clockwise approximately 4-5 threads (if unable to turn full distance by hand, look for misalignment issues with tubing and correct for proper seal).

Step 5
- Use Torque Wrench to properly set (see chart in next frame) Cone & Thread Connections. (Available with wrench adapters in Tools and Installation brochure)

For torques or optional materials (lower pressures), see Tools and Installation Catalog 02-0149SE

*9/16" Connection will have collar inside Gland Nut but assemblies using same process as shown.
Coned-and-Threaded Nipples

Ultra High Pressure - Pressures to 150,000 psi (10350 bar)

For rapid system make-up, Parker Autoclave Engineers supplies pre-cut, coned-and-threaded nipples in various sizes and lengths for Parker Autoclave Engineers medium pressure valves and fittings.

Special Lengths:
In addition to the standard lengths listed in the table below, nipples are available in any custom length. Consult factory.

Material:**
Catalog numbers in table with "-HP" suffix refer to HP160 material (100,000 psi max) and with "-316" suffix refer to 316/316L Stainless Steel UNS S31600/S31603 cold worked material.

Notes:
See High Pressure Tubing section of this brochure or Technical Brochure for pressure ratings at various temperatures.

* Maximum pressure rating is based on the lowest rating of any component. Actual working pressure may be determined by tubing pressure rating, if lower.

All dimensions for reference only and subject to change. For prompt service, Parker Autoclave Engineers stocks select products. Consult your local representative.
Check Valves

Ultra High Pressure - Pressures to 150,000 psi (10350 bar)

Prevent reverse flow where leak-tight shut-off is not mandatory. When differential drops below cracking pressure, valve closes. With all-metal components, valve can be used up to 600°F (315°C). See Technical Information section for connection temperature limitations. (Not for use as relief valve.)

Ball and poppet assure positive, in-line seating without “chatter”. Poppet is designed essentially for axial flow with minimum pressure drop.

Cracking Pressure*: 20 psi (1.38 bar) +/- 30% No optional cracking pressures available.

Temperature Range: With All-Metal components, valve can be used to 600°F (315°C). Minimum standard operating temperature is 0°F (-18°C).

Installation:
Vertical or Horizontal as required. Flow Direction arrow on valve body.

NOTE: For optional material see Technical Brochure. Special material check valves are normally supplied with four flats in place of standard hex.

Material of Construction:

| Item # | Description       | Material       |
|--------|-------------------|----------------|---------------|
| 1      | Gland             | 316 SS         |
| 2      | Gland Nut         | 15-5PH         |
| 3      | Cover             | 15-5PH         |
| 4      | Cone Ring         | 316 SS         |
| 5      | Ball              | Tungsten Carbide |
| 6      | Spring            | 302 SS         |
| 7      | Check Valve Body  | 15-5PH         |

Basic Ball Check Valve Repair Kits:
Check Valves are easily repaired. Add “R” to front of valve catalog number for proper repair kit (example: RCB9901) See “Cover Torque” on page 12 for re-assembly.
Include any catalog number suffix marked on original part when ordering repair kit.

Anti-Vibration Collet Gland Assembly
Series KCBGL Ultra High Pressure - Pressure to 150,000 psi (10342 bar)

Series KCBGL: Sizes to 1/4” (6.35 mm), 5/16” (7.94 mm), 3/8” (9.53 mm)
For extreme conditions of vibration and/or shock in tubing systems, such as locating a valve or fitting on an unsupported line near a compressor, Autoclave coned-and-threaded connections are offered with the Anti-Vibration Collet Gland Assemblies. A less complex and more economical design than other vibration-resistant connections, the collet gland assembly utilizes the same coned-and-threaded features of Autoclave high pressure connections.

Series KCBGL extends the gland nut to provide room for the tapered, slotted collet and collet nut. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing.

Material
316 SS with bonded dry film molybdenum disulfide to help prevent galling. Additional thread lubricant not needed.

Note:
1) To order valve and fitting components with anti-vibration assemblies add -K to catalog numbers.
2) Special material assemblies are normally supplied with four flats in place of standard hex.
3) See Tools and Installation Catalog for Installation Instructions including Torque Specifications.

Anti-Vibration Collet Gland Assembly

Series KCGL Ultra High Pressure - Pressures to 100,000 psi (6895 bar)

Series KCGL (9/16")

For extreme conditions of vibration and/or shock in tubing systems, such as locating valve or fitting on an unsupported line near a compressor, Parker Autoclave Engineers coned-and-threaded connections are offered with the Anti-Vibration Collet Gland Assemblies. Completely interchangeable with standard Parker Autoclave Engineers high pressure connections, the Collet Gland Assemblies provide equally effective pressure handling capability.

In standard connection systems, the bending stresses on the threaded area of the tubing imposed by excessive vibration or movement may cause premature fatigue failure of the tubing at the back of the thread. By moving the stress concentration back to the unthreaded part of the tubing and providing a wedge-type gripping action, the Parker Autoclave Engineers anti-vibration collet gland assembly strengthens the entire structure. With stress concentration reduced and overall stress level maintained well below the endurance limit of the material, the result is extended vibrational fatigue life.

A less complex and more economical design than other vibration-resistant connections, the Collet Gland Assembly utilizes the same coned-and-threaded features of Parker Autoclave Engineers high pressure connections. In Series KCGL the gland nut is recessed to accommodate a tapered, slotted collet that grips the tubing at a point behind the threaded area of the tubing. The design provides a slight difference in angles between the collet and the corresponding taper of the gland nut. As the nut is tightened, it acts to wedge the tapered end of the collet into a gripping engagement with the tubing and, at the same time, forces the collar and tubing assembly into line contact with the connection seat.

THIS IS PARKER
At Parker, we’re guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further information call 1-800-C-Parker.
